

REPEAT & DEFEAT!

DRONTAL®

PERFECT PARTNERS

More complete protection against parasites

The annual heartworm injection does not protect your pet against other harmful worms. For the most complete protection from worms, pair Drontal® and an annual heartworm prevention.

To fight all parasites your dog might encounter, combine a yearly heartworm prevention, Drontal® Chews or Tablets and a flea and tick treatment.

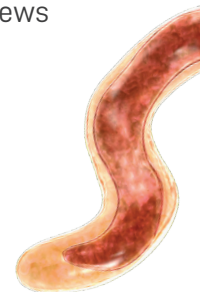

**ANNUAL HEARTWORM
PREVENTION**

**WORMING
PROTECTION**

**FLEA & TICK
PROTECTION**

THE SAFE CHOICE

Unsure of your dog's heartworm prevention status? It's safe to use Drontal®. Remember to have your dog tested for heartworm by your veterinarian.

The use of certain products that contain Milbemycin oxime in heartworm positive dogs has not been evaluated^{1,2} and could have detrimental effects.³⁻⁵

DRONTAL® COMES IN RANGE OF CHEWS, TABLETS AND PUPPY SUSPENSION.

Ingredients are evenly distributed so chews and tablets can be halved.

Chews are effective with or without food, even if swallowed whole.

**DRONTAL®
CHEWS
98% PALATABILITY⁶**

REPEAT & DEFEAT!

DRONTAL®

NOT ALL INTESTINAL WORMING PRODUCTS COVER ALL WORMS

Drontal® provides the most comprehensive protection against gastrointestinal worms to give your dog complete coverage. Here are the gastrointestinal worms that can infect dogs around Australia. Drontal® controls all of these for your peace of mind.

Other worming products⁷ provide LESS coverage:

DOES NOT COVER:
Ancylostoma braziliense
Uncinaria stenocephala
Tapeworm – all species
